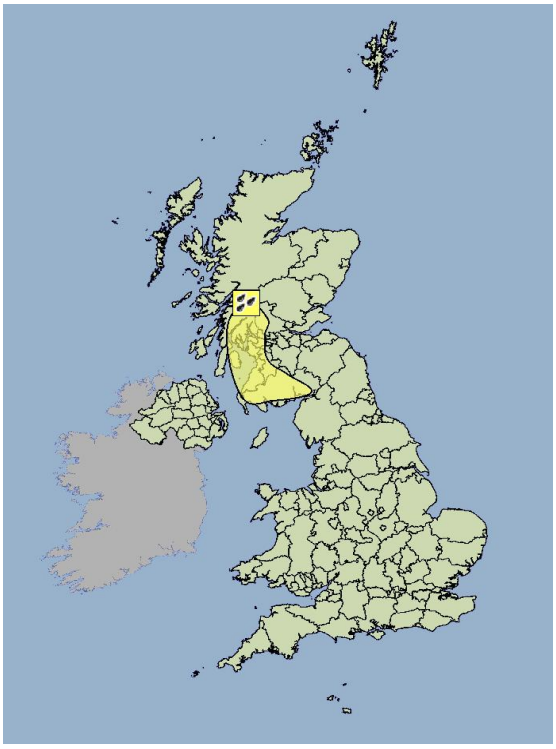
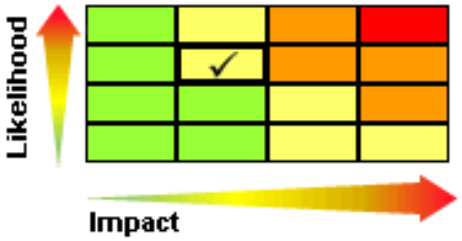
National Severe Weather Warning Service





Chief Forecasters Assessment
An Atlantic frontal system will edge southeastwards across western and northern areas of Britain this afternoon, before becoming slow-moving, bringing persistent and occasionally heavy rain to western and southwestern areas of Scotland.

Including rain that has fallen during the morning, totals of 40 to 60 mm are likely over some of the high ground, with around 30 mm falling in a 9 hour period in a few places. The rain will gradually clear away southeastwards overnight.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **13:00 on Fri, 01st Apr 2016** until **23:55 on Fri, 01st Apr 2016**

Persistent and occasionally heavy rain will continue through Friday afternoon and evening, bringing the possibility of localised flooding. Standing water and spray will make for difficult driving conditions.

The largest rainfall totals will be across higher ground, particularly in Dumfries and Galloway.
